

RISA Webinar Q&A

Advanced Modeling with
RISA-3D's Graphical Tools

October 26, 2012

Q: I see that when Debbie "dynamically" rotates her model view; her momentary icon switches to an "arrow-type" circle, and the model rotates about all 3 axes at once. Is this true? If so, how does she do it?

A: This is a dynamic rotate and does rotate about all axes. You can do this by holding down the shift key and rotating using the middle button on your mouse.

Q: What method did she use to select members on the screen by "names" from a list?

A: She used the Criteria Selection option in the Selection toolbar. This is the icon that has a question mark on it. She then went to the Members tab and selected based on the Member Label.

Q: When's the next version of RISA-3D coming out?

A: End of December.
